

DANIIL ZAVADIN

Software engineer

Profile

Bachelor ICT student at Saxion, passionate about exploring diverse areas of technology and constantly expanding my skill set.

I thrive on challenges and enjoy diving into topics that are new to me, as I believe hands-on experimentation is the best way to learn.

My flexible skill set allows me to adapt to various projects as a software developer.

What I like most is seeing physical results to my efforts, and that is why I build personal tools and like to tinker with some dev boards.

I am eager to further develop my knowledge and gain experience in cutting-edge technologies while contributing meaningfully to impactful projects.

🎓 Bachelor ICT student

Languages

Ukrainian (Native)

English (Fluent)

Dutch (A2)

Skills & Knowledge

Programming languages: Rust, Java, C#, C, C++

Infrastructure: Linux, Bash, Docker

Cloud engineering: AWS, Terraform

Version control and DevOps: Git, GitHub Actions, GitLab CI/CD

AI-assisted development: OpenCode, Agentic development

Databases: PostgreSQL, SQLite

Project management: Microsoft Planner, Jira

Soft skills: Problem Solving, Critical Thinking, Collaboration

Professional Experience

Software Engineer Intern

9/2024 - 1/2025

Everbridge one2many (Deventer, Netherlands)

- Integrated a LoRa water level sensor into a physical security information management (PSIM) product.
- Built a prototype interface for communication between the product and the sensors.
- Enabled operator alerting inside the PSIM system and forwarding of alerts to a public warning system across multiple channels.

Software Engineer Intern

4/2026 - 10/2026

Demcon Life Sciences & Health (Enschede, Netherlands)

- Worked on the Needle Positioning System (NPS) for guiding robot assisted liver cancer ablation operations
- Migrated the system to a new framework, improving the architecture, data flows and responsiveness
- Researched medical imaging techniques and desktop app development

Projects

Mockloop Heart Monitoring Prototype

2025

IoT, embedded computers

- Re-designing a prototype of a body area sensor network with a team.
- Monitoring the state of an artificial heart built as part of the Holland Hybrid Heart initiative.
- Focused on making the solution more affordable.

dionysus - Application launcher for Wayland compositors

Ongoing

Rust, GTK4

- Building an XDG compliant layer-shell application launcher
- Making user interfaces, sort and search of entries, compositor input handling
- If no app launcher does what you want it to do, make one yourself!

zagreus - Wayland desktop shell for Linux desktop

Ongoing

Quickshell, Qt QML

- Building a custom shell for the Wayland compositors (Hyprland only now)
- Creating interface components for OS operations such as notifications, popups, and info docks.
- Using the project to better understand how the Linux desktop works under the hood.

Education

Bachelor Information and Communication Technologies

9/2022 - 9/2026

Saxion University of Applied Sciences, Deventer, Netherlands
